

CSCI 4, HOMEWORK 1

EVAN DRAKE

1. QUESTION 1

Please explain what pseudocode is and why we use it.

2. QUESTION 2

Please write some pseudocode for opening a jar of peanut butter. Remember that this is less about getting it right and more about breaking the problem down into very small pieces.

3. QUESTION 3

Please explain to me what the basic data types are and why we need them in your own words.

4. EXTRA CREDIT

Search the internet for some interesting computer science area's. I want you to try and find something that is interesting to you, not necessarily to this class.

Here write the subject and paste the link to it. Also put three questions you have about that subject/niche something specific to that subject that might not be right to ask about all of CS. If your questions are interesting to me, I might take the opportunity to answer some of them in lab (to the best of my ability).
